ivangra85@gmail.com · ivan-martinez.org

Full Stack Developer with 4+ years of experience building production-grade SaaS platforms, specializing in React, Node.js, Next.js, and NestJS. Currently Tech Lead at Redlizard Studioz, owning the end-to-end architecture of a multi-tenant document management platform built from scratch. Comfortable across the full stack, from PostgreSQL schemas and NestJS microservices to React/Next.js frontends, with hands-on infrastructure experience in Linux, AWS, and CI/CD. Experienced working in Agile/Scrum teams using Jira for sprint and task management across all professional engagements.

PROFESSIONAL EXPERIENCE

Redlizard Studioz Inc.

Canada

Software Engineer - Tech Lead

September 2025 - Present

- Built a document management SaaS for heavy transport companies from scratch; promoted to Tech Lead after 3 months, owning architecture, business logic, and production infrastructure.
- Designed multi-tenant architecture with per-company subdomain isolation via Cloudflare, ensuring complete data segregation between tenants.
- Built a dynamic billing engine with Stripe Invoices: tier-based pricing algorithm based on driver counts, 3-day deferred charge scheduling, and invoice snapshots in PostgreSQL.
- Implemented SMS and email notification pipeline using Twilio and Postmark, queued and retried via Redis and scheduled jobs.
- Set up production deployment on a bare Linux server with pm2 and integrated Keycloak for identity and access management.

Nacer Digital

Mexico

Software Engineer

February 2025 - January 2026

- Built a real-time chat with Firestore supporting full conversation persistence across workflow stages (bid, contract, active work) in a multi-role system.
- Implemented a multi-role rating system (star distribution, weighted average, last-5-reviews) with UX parity to Upwork.
- Developed milestones, time logs, and dispute resolution flows with an admin decision panel.
- Replicated full AWS production environment for staging from scratch: Amplify, Elastic Beanstalk, RDS, SSL, and DNS routing.

IVENTIVA

Cochabamba, Bolivia

Software Engineer

April 2023 - February 2025

- Designed and built a multi-stage notification pipeline: 3 types x 3 retries = up to 9 scheduled emails per user, covering identity verification (US/CA providers), bank authentication, and mortgage capacity flows.
- Reduced a critical query from 28s to 3.5s (87% improvement) by redesigning table structure, eliminating N+1 ORM calls, and implementing materialized views.
- Managed Heroku deployments, DB migrations, log monitoring, and production incident response.

Fundacion Jala

Cochabamba, Bolivia

Full Stack Developer - Intern

January 2022 - January 2023

- Strengthened software engineering foundations through real project work applying SOLID principles, design patterns, functional programming, and clean architecture in Agile/Scrum teams.
